Subject: Draft Willamette Cleanup Plan

The proposed cleanup plan does not go far enough to solve the pollution problems. It does little to hold the responsible entities to contribute to removing the pollution.

I support option G but with an amendment to establish a goal to end the Fish Consumption Advisory for everyone. There should be a deadline provided for this to occur.

- The plan removes too little contaminated sediment from the river. Some recommend that at least 1000 acres of polluted sediment be removed.
- • The plan relies mostly on "Monitored Natural Recovery" which leaves polluted material in the river and simply monitors it over time.
- • Entities which have liability for the persistent pollutants in the river sediments must meet their community obligation to conduct a comprehensive and timely cleanup.
